The Struggle

Living by water and the challenges...

When it's Good...

When it's Bad...

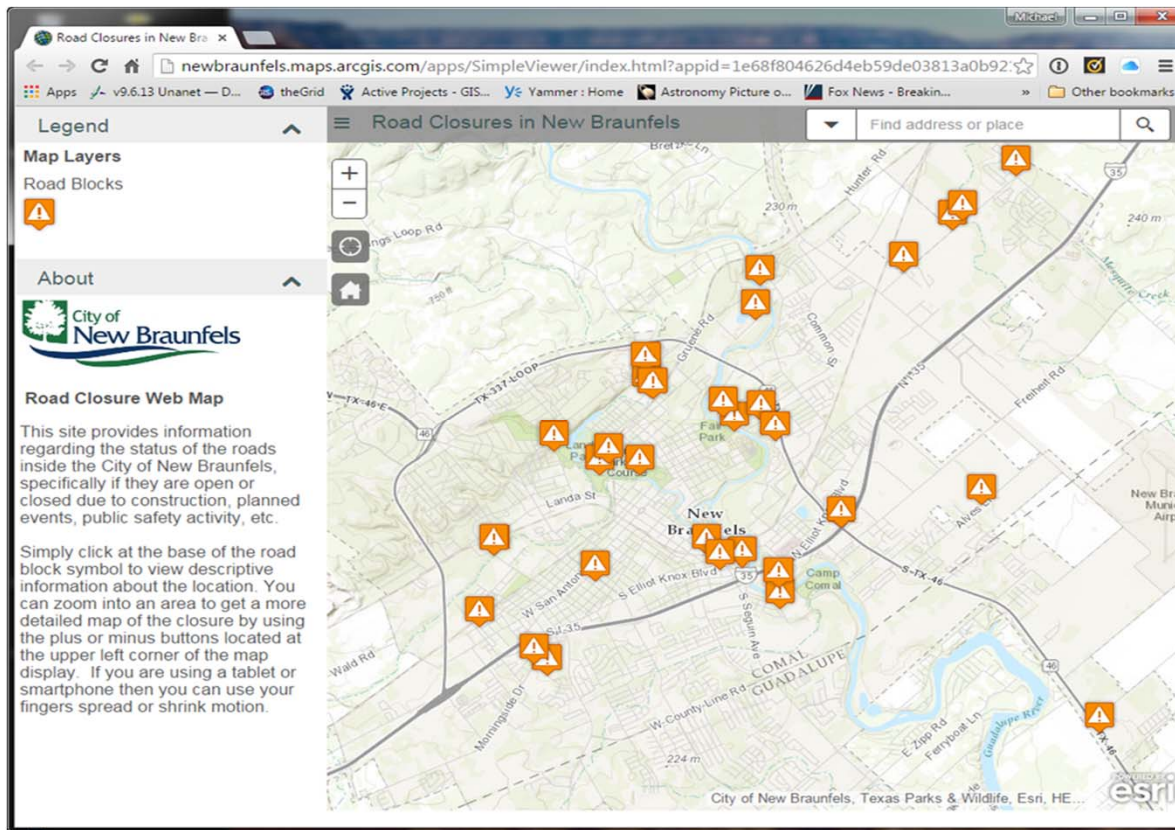

The Problems

The Solution(s)

ArcGIS Road Closure Application (Public View) And it's many ways to be updated.

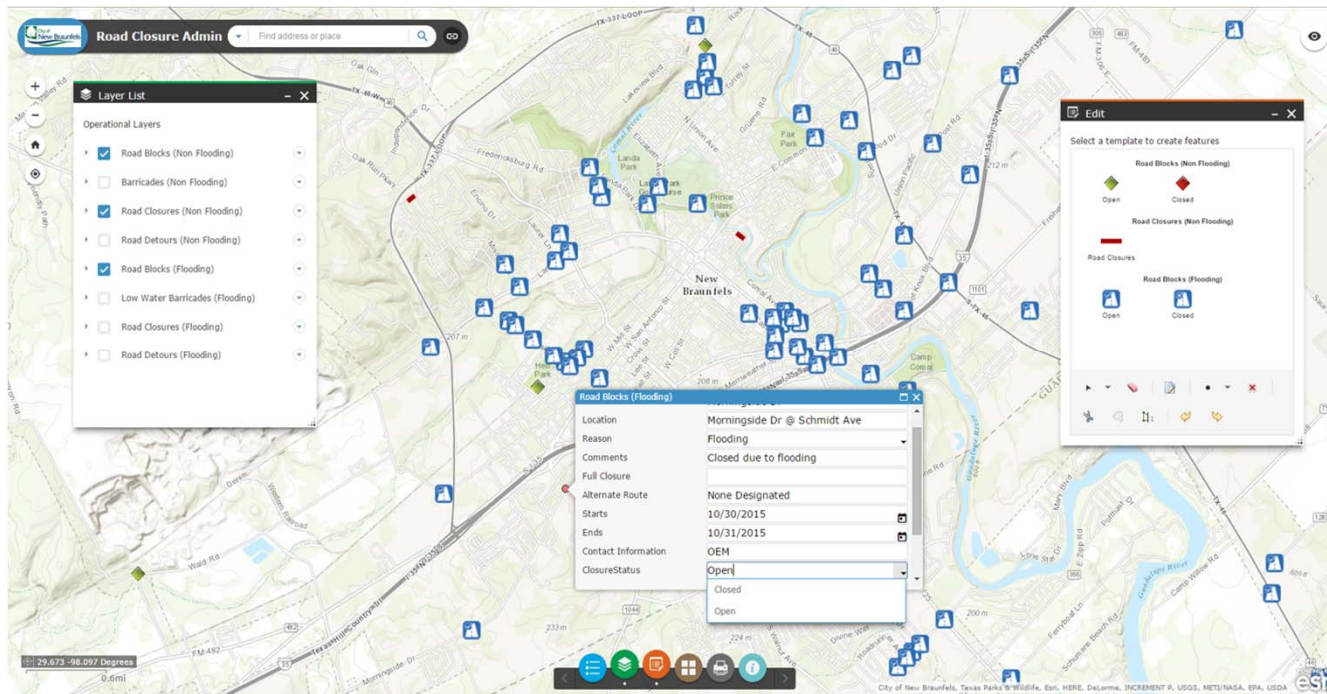

- ArcGIS Online template for road closures
- Uses structure from LGIM to support the application
- Public can view roadways that are closed
- Simple to use

ArcGIS Online Web App Builder for Updates

Areas that ALWAYS flood...

- Update areas of historical flooding
- Can be used to create new road closures (non-historical) quickly and easily

Non-Map Application for Updates

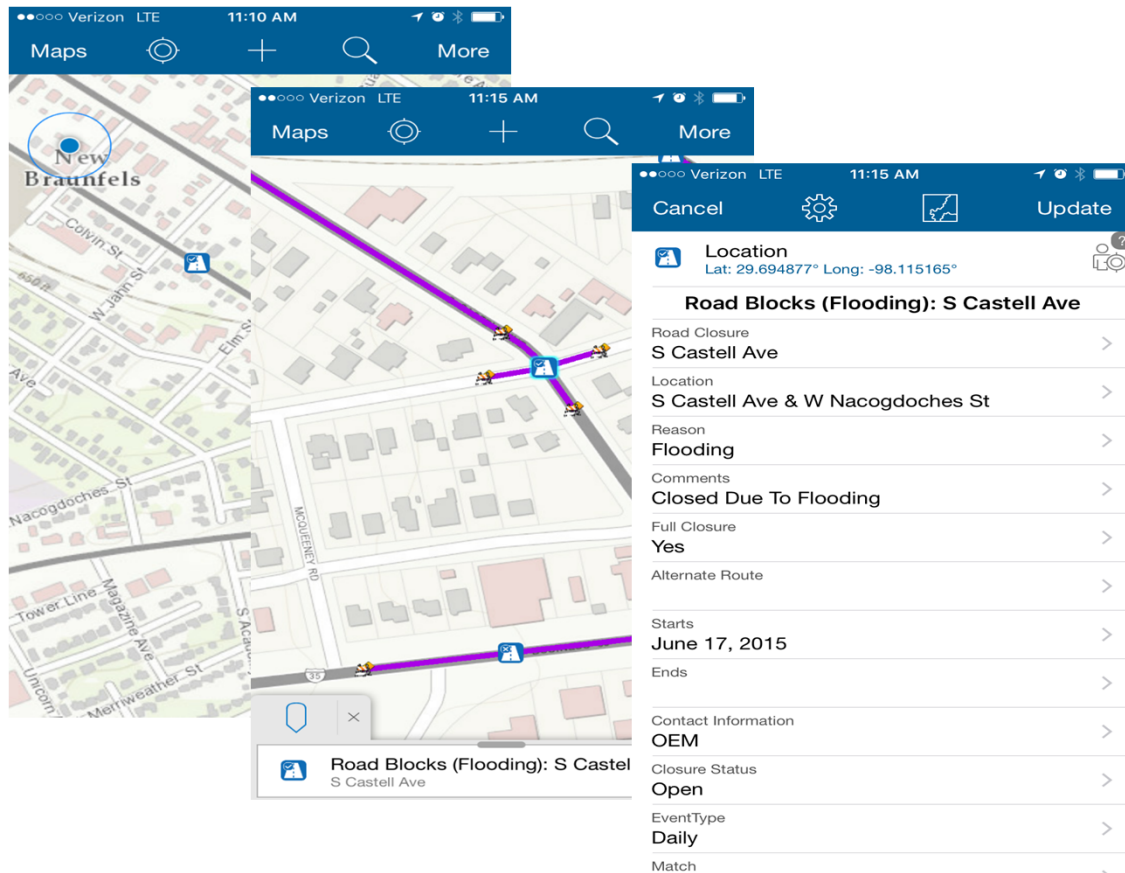

One method utilized by field crews to update the public facing app...

The image shows three overlapping screenshots of a web application for updating road closure status. The application is titled "City of New Braunfels Road Closure Status". The first screenshot shows the "Search for a road closure" section with a "Location" input field and a "Select a road closure to update the status" dropdown. The second screenshot shows the "Closure Status" section with a "Select..." dropdown and a "Submit" button. The third screenshot shows the "Search for a road closure" section with a "Location" input field and a "Select a road closure to update the status" dropdown. The form is designed to be simple and intuitive for field crews to use.

- Rapid, intuitive way to search and change status of pre-existing closures
- User type is aware of location
- Immediate updates to the map
- Easy for non-mapping workers
- Responsive, works on phones and tablets easily

Collector for ArcGIS App for On-Site Updates

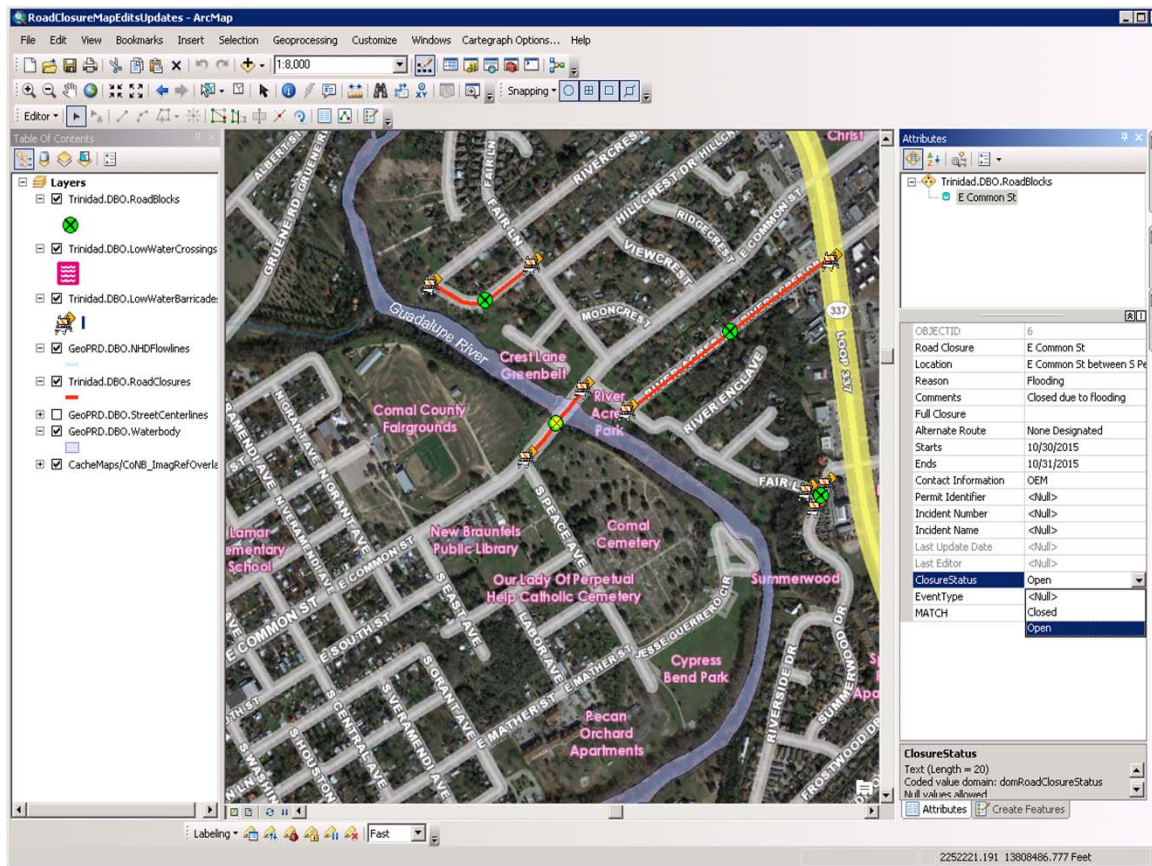

Another field-based updating method...

- Quick method for changing the status of closures
- Requires no searching...GPS locates user at closure site
- Cases where street signs have washed away and/or user is not local

ArcGIS Desktop for Updates

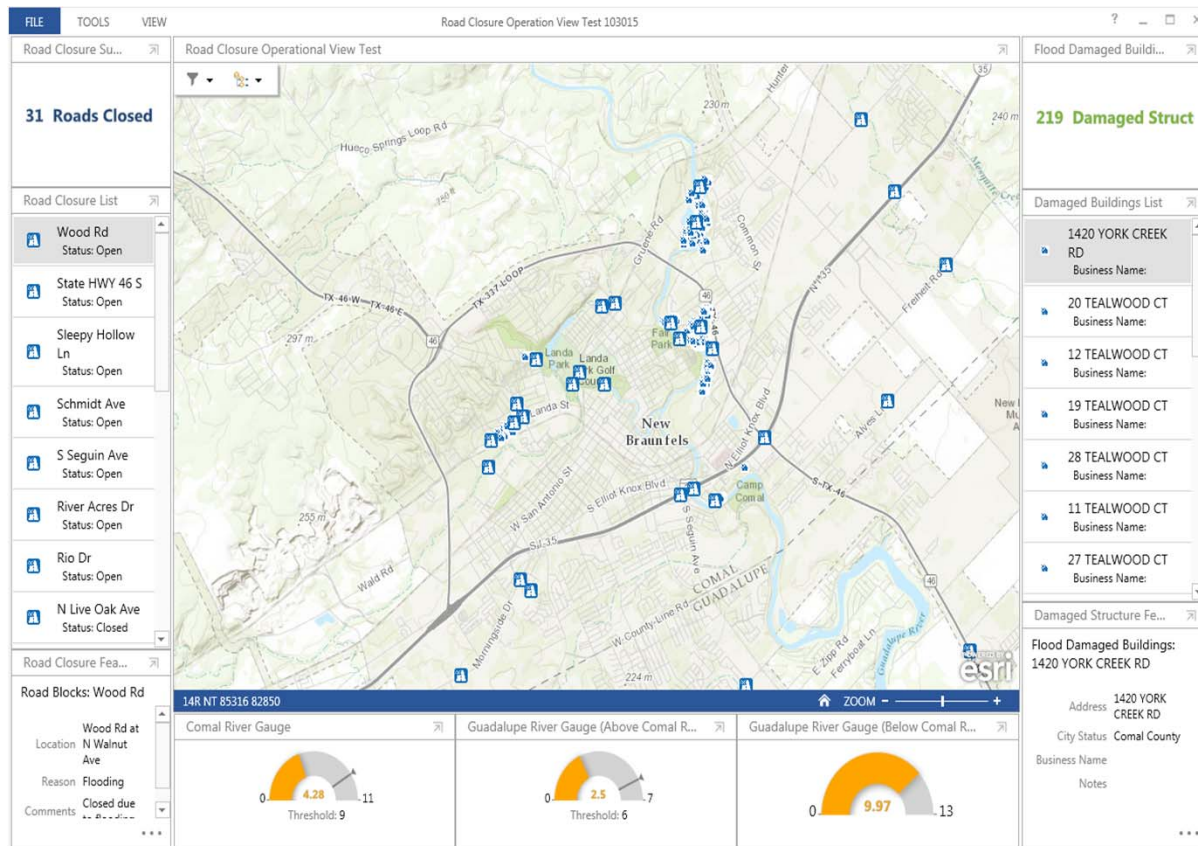

Updates by GIS staff positioned within the EOC...

- Primary software for handling the event
- Allows road closures to be updated and other features that support an OEM event to be mapped or updated
- Most analog map plots will originate here

Operations Dashboard for ArcGIS

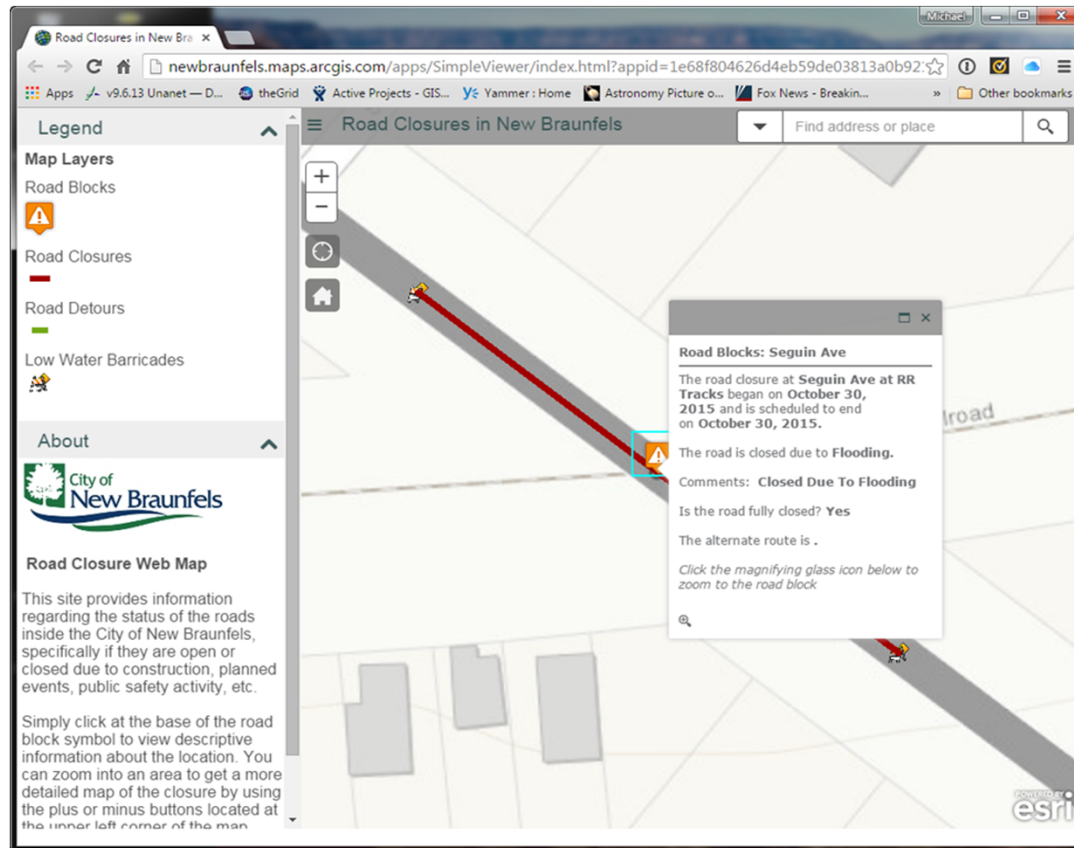

Used within the EOC to show real-time status...

- Consumes the **same** REST services as the road closure application
- OEM staff can view road closures and other occurrences in real time

Road Closure Public Viewer Updating

Some value-adds to enhance the streamline the updating process..

- Large scale views reveal barricades and closed segments
- Barricades and segment closures react to the status of the block closure status

Esri Report Writer

Used for quick reporting and dissemination to local media...

City of New Braunfels Road Closures

12/8/15 11:07 am

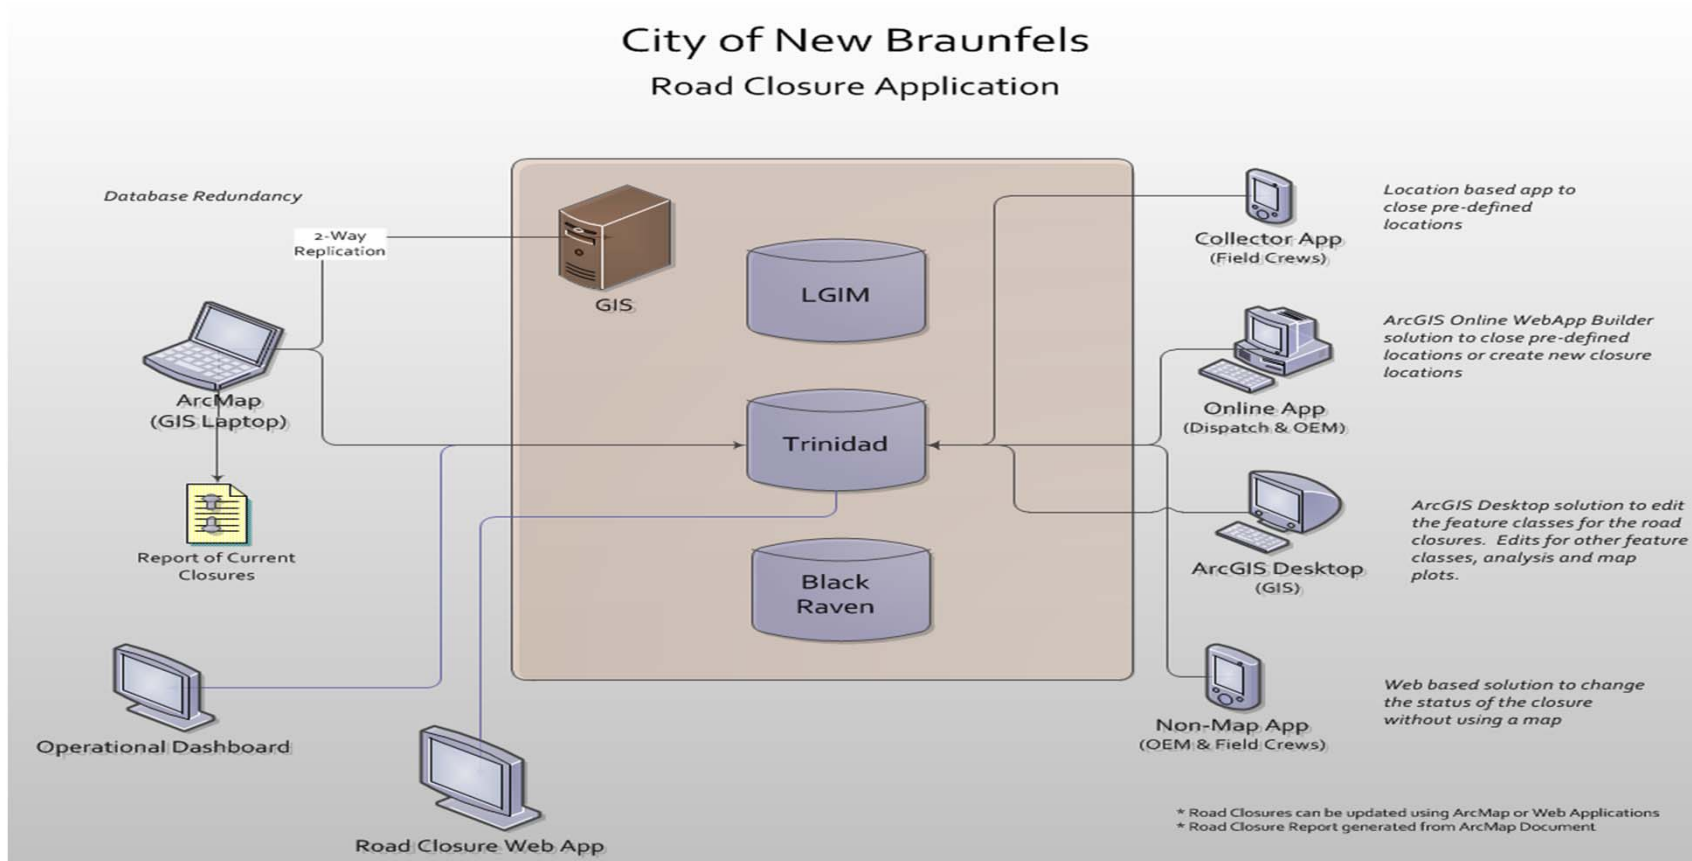

Road Closure	Location
Airport Rd	Airport Rd between Westmeyer Rd and FM 758
Altgelt Ln	Altgelt Truck Stop Entrance
Alves Ln	Alves Ln @ Tripp Ln

Summary

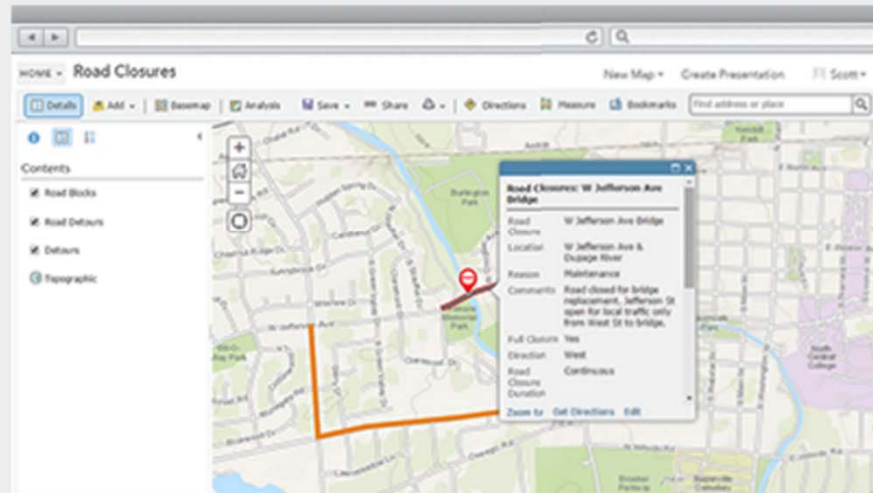

Use case, deploy, and revise....

Overview

Road Closures is a configuration of ArcGIS Online used by engineers and operations staff to track roadblocks or closures set up to control or block traffic along a road. Road closures and related detours are typically defined by a public works department, and/or public safety agency during special events, public safety incidents, and construction activities.

Focused road closure maps can be embedded on your website and shared with the general public. This information can also be proactively shared with consumer navigation and traffic applications (for example, Waze) that are used daily by citizens in your community.
