# QA/QC DATA WITH COLLECTOR

BUILD AN EASY TO USE DATA REVIEW TOOL USING ARCGIS COLLECTOR

# DATA MANAGEMENT TECHNIQUES

- Don't just use Collector for field work. Use it in house to manage all your data review tasks
  - Incredible tool for the non-technical user
  - Users interact only with data that needs attention
  - Easily integrated with your reporting services

# DATA MANAGEMENT TECHNIQUES

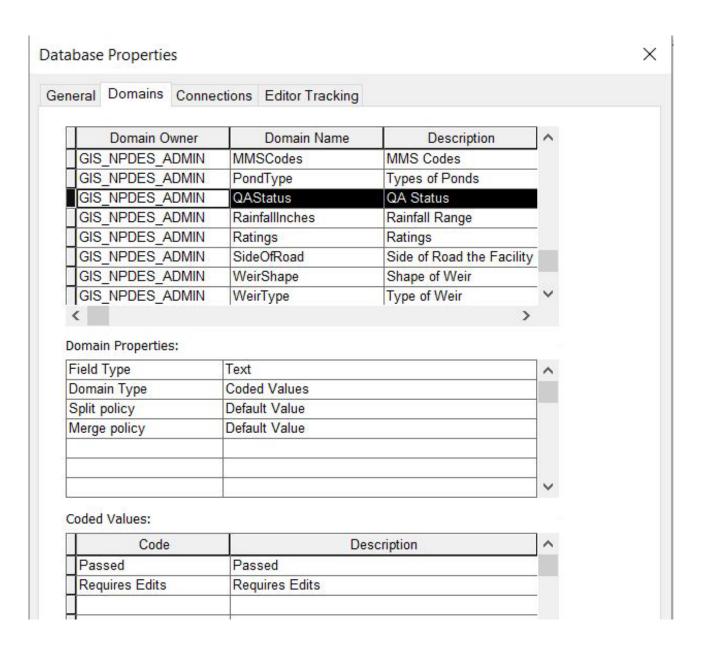

## Scenario

- Information is being collected for features in a related table by external consultants
- Managers need to review the consultants work
   before the new information is available to users
- Managers need a tool that shows only the information that needs to be reviewed
- Users will only have access to data that has been reviewed

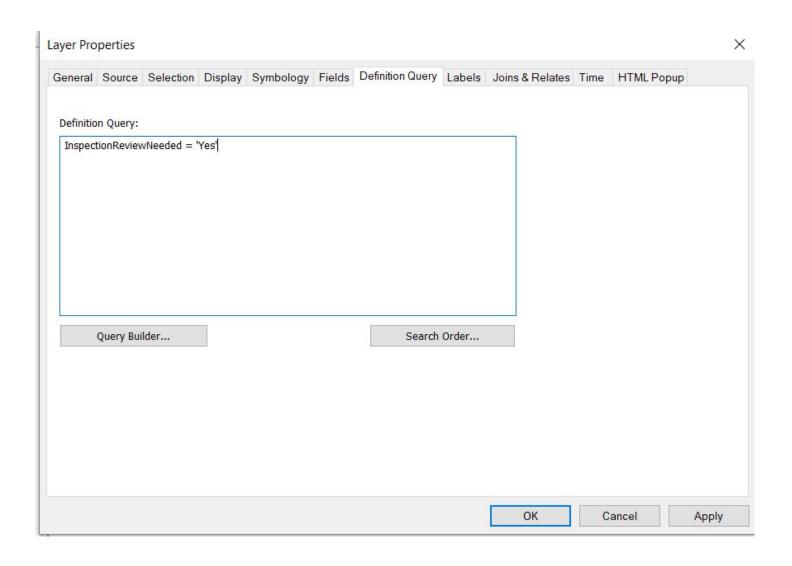

# RECIPE

- Follow these simple steps to have your own QA/QC tool.
  - Add a new column to your feature class named "InspectionReviewNeeded"
  - Add a new column to your inspection table named "QAStatus"
  - Create a Domain called QAStatus, give it two values "Passed", "Needs Review" and associate it with the QAStatus field.
  - Include the QAStatus field as part of a definition query on your existing data and reporting services.
  - Publish a QAQC service based on definition queries applied to these two columns

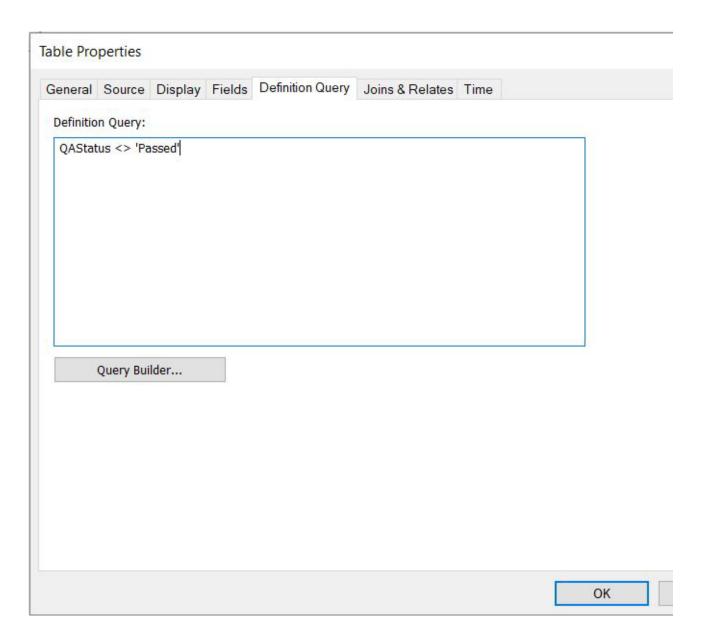

# **NEW DOMAIN**

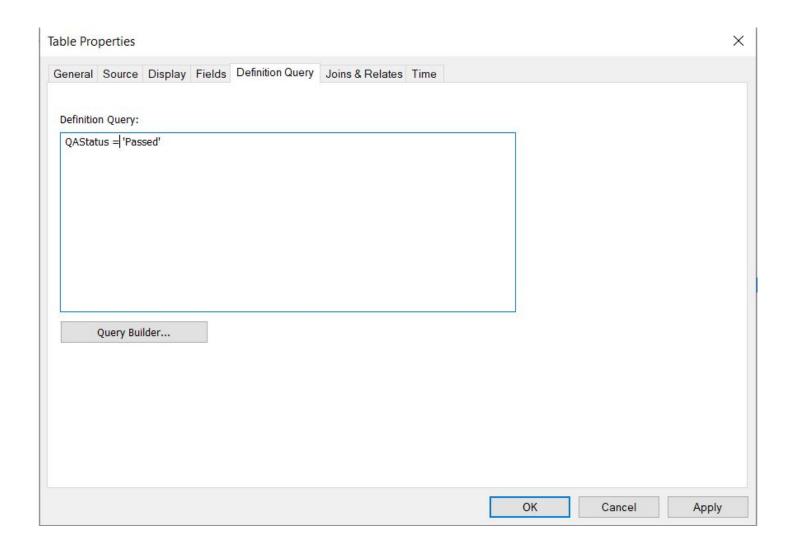

# QAQC LAYER SERVICE DEFINITION

# QAQC TABLE SERVICE DEFINITION

# DATA TABLE SERVICE DEFINITION

# ADD A DATABASE TRIGGER TO PULL IT ALL TOGETHER

 Update the feature class so it will know when there is an associated inspection record that needs review

UPDATE FeatureA set InspectionReviewNeeded = 'No';

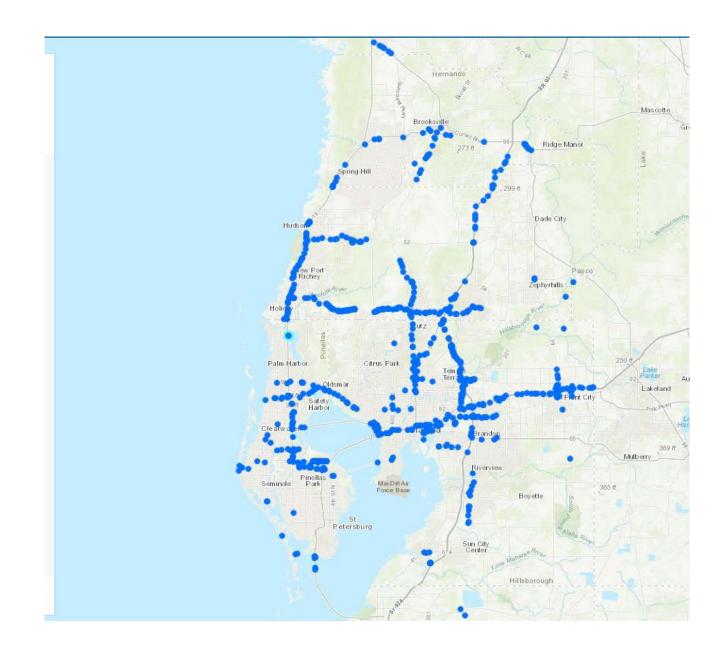

UPDATE FeatureA set InspectionReviewNeeded = 'Yes' WHERE

Feature A. Globall D in (SELECT DISTINCT Parent GUID from Feature Alnspections

WHERE QAStatus <> 'Passed');

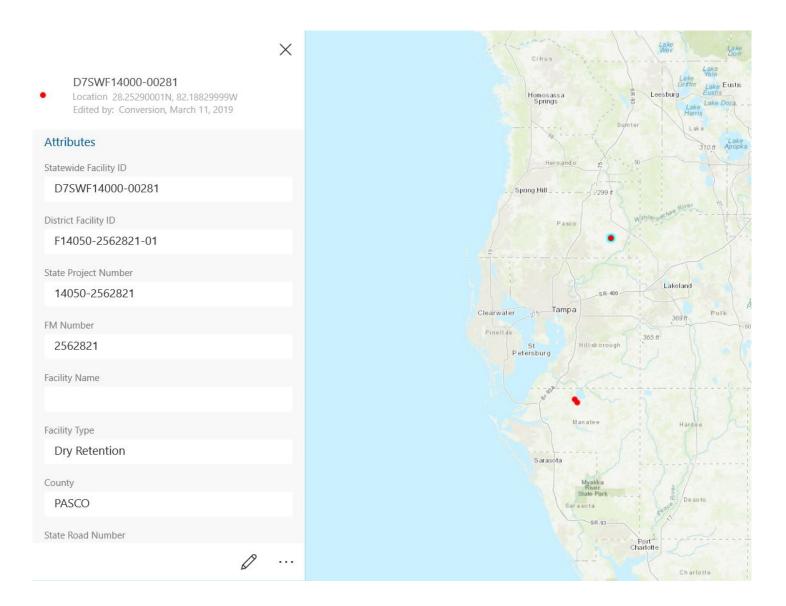

# DATA COLLECTION SERVICE

 Shows all features but does not include any related inspection records flagged as needing review.

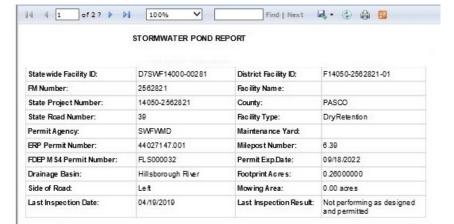

# **QAQC SERVICE**

 Shows only features that have related inspection records flagged as needing review.

# REPORTING

Easily integrate reports with both services.

### Pond Inspection History

Date	Inspector	Inspection Result	Report
4/19/2019	Eric Brown	Not performing as designed and permitted	
2/16/2018	R Neldert	Performing as designed and permitted	4

### Pond Maintenance Needs History

ate	Maintenance Need	Report
/19/2019	Test Maintenance Need	

# THINGS TO CONSIDER

### Supports nested tables

• A table related to the inspection table can also be included, just add another column to store its value in the feature class

### Can also be used for Feature classes

Control feature classes in the same way

### Remember to include limits in other services

- Published mxds
- Reporting services
